

# Choose from the following:

## Roll-on or Clip-on

Up to 30m rolls or sheets in 90cm lengths

### Clip-on Sheets

Clip-on  
No Screws

### Roll-on – No Joins

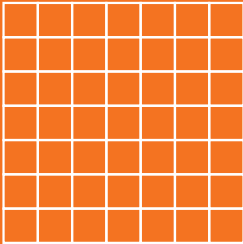

Fitting into the roll of the gutter is not recommended

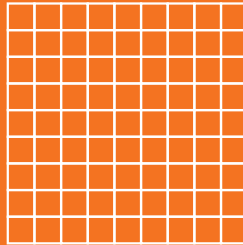

For Internal Roll-on Edge Gutter fit the mesh to the TOP edge

## Two sizes of mesh

Standard Mesh or Super Mesh

Standard Mesh 5.4mm

Super Mesh 4mm  
(greater level of screening)

## Blue Mountain Mesh™ colour checklist<sup>^</sup>

Our colours are designed to match the COLORBOND® steel colour range:

PLUS other colours are available for tiles, including Terracotta, Pale Terracotta and Ironbark.

Mesh suspends leaves above gutters & wind blows them away

Sunlight and wind dries out gutters completely

Valley sections are protected using twin 'profiles' throughout

Each order is custom made to your requirements

Blue Mountain Mesh™ is supplied with a Do-It-Yourself (DIY) installation guide, however if a full installation service is required, we can refer one of our installation partners.

COLORBOND® and all colour names used are registered trade marks of BlueScope Steel Limited. \*Professional installation services are available subject to location and are provided by independent contractors and not Rain Harvesting Pty Ltd. The 12 year guarantee on the materials used in Blue Mountain Mesh™ is subject to terms and conditions. Please contact Rain Harvesting Pty Ltd for details.

# The ultimate gutter solution

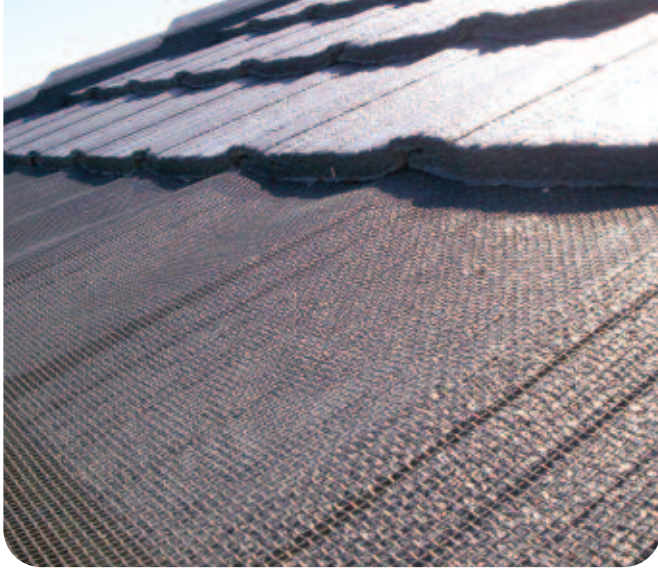

- Keeps leaves, debris and vermin out of gutters
- Avoids a major fire risk
- Eliminates mosquito breeding habitats
- Enhances quality of harvested rainwater

All steel – long lasting and FIRE PROOF

- Custom made to order
- Suits all roof types – full range of colours available
- DIY or professional installation\*

Cleaning out roof gutters is a time consuming and dangerous task. Blue Mountain Mesh™ significantly reduces maintenance by keeping gutters clean and clear of build up and debris.

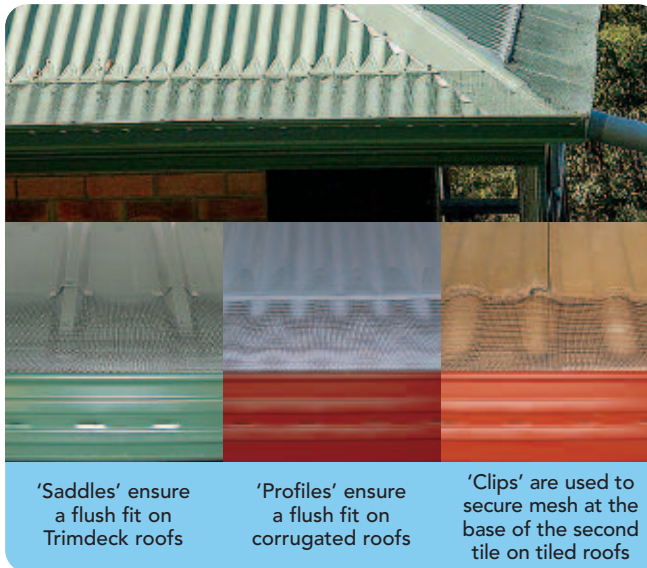

## How does it work?

Blue Mountain Mesh™ is an innovative all steel mesh system that prevents leaves and debris entering gutters. The mesh fits from the top outside edge of the gutter, across the gutter section and is then attached to the roof surface. This creates a platform that suspends leaves and debris above the roof gutter, allowing the majority of flammable material build-up to be **blown away by wind action**.

Blue Mountain Mesh™ **prevents blocked gutters and downpipes** which can cause flooding and damage to the home. By keeping roof gutters clean and clear of leaf build up, Blue Mountain Mesh™ **ensures gutters dry out quickly** after rain. Dry gutters last longer, require less maintenance and eliminate potential mosquito breeding habitats.

Blue Mountain Mesh™ not only keeps out debris, it also **prevents vermin from entering the roof and ceiling** area of the home. It even prevents the loss of stray backyard cricket balls and toys!

Blue Mountain Mesh™ can be **easily removed and reinstalled** if gutters are to be replaced.

'Saddles' ensure a flush fit on Trimdeck roofs

'Profiles' ensure a flush fit on corrugated roofs

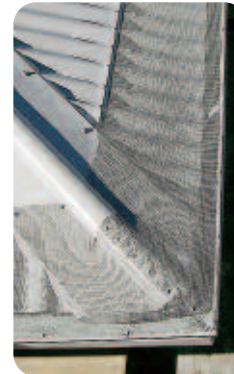

'Clips' are used to secure mesh at the base of the second tile on tiled roofs

## The ultimate gutter mesh

Invented in Australia as part of a complete rainwater collection and storage system, Blue Mountain Mesh™ is the ultimate gutter solution. Manufactured by Rain Harvesting Pty Ltd, Blue Mountain Mesh™:

- Is the **first all steel, purpose designed and built** fire proof leaf and debris protection system for metal and tile roofs available in Australia in a complete range of colours.
- Is designed to shed leaves and debris and incorporates either a 4mm or 5.4mm aperture mesh to allow sunlight and wind into the gutter system so the gutter **dries out quickly after rain**.
- Does not create an environment for mosquitoes, spiders and other vermin.
- **Allows complete visual inspection** of the system at all times and can be hosed out if required.
- **Does not 'lint' up and shed water.**

Blue Mountain all steel gutter mesh not only prevents leaves and debris entering gutters, it also stops a whole range of vermin from entering the roof and ceiling area of your home.

- Utilises a hot dipped, galvanised (zinc coated) steel that is **rust proofed**, oven baked and available in a complete range of colours. It also uses the **highest quality steel fixings and flashings**.
- Is **fire proof** with a flammable rating of 1 under AS1530.3 (Ignitability on a scale of 0-20).
- **Fits all gutter profiles** (Squareline, Quad, Half Round, etc.) and can be adapted to **fit all roof types** including:
  - Metal roofs** – uses a patented 'profile' to fit corrugated roofs and bullnose verandahs, is pre-cut for Trim Deck/Flat Pan using 'saddles' to ensure a flush fit with the roof, and can be hand cut for other styles of metal roof such as Spandek and Longspan.
  - Tile and shingle roofs** – fits most known tile profiles, even Decrabond, Decramastic, Gerrard, Savanna and other metal tiles using 'clips' to attach to the second tile.
- Comes with a **12 year guarantee\*** when fitted to buildings that comply with the Building Code and Australian Standards.
- Is **custom made** to measure, and it comes with a choice of **over 20 colours** to match all modern metal and tile roofs, making it an attractive improvement to the home.

Blue Mountain Mesh™ is fire proof and built to last.
